

Laravel PHP Assignment

Goal:

To make an API on Laravel with CRUD functionality

Task:

You have to create a page using the following technologies

- PHP
- MySQL
- Laravel
- Git

The code should be available on a public github repository.

Create a CRUD API for products of an ECommerce shopping website.

The code should be well documented and data should get saved in a MySQL database.

You will have to create a model in laravel considering the fields you can think of.

Upload the code on Github so that we can review it

Your code can have the following additions as well

- Dockerising the application
- Code is very well documented
- API has documentation available
- Fixtures for base data
- Caching
